B.Tech, Artificial Intelligence

Address : Sis Safaa, A-block 205, Guduvanchery, chennai - 603202

Summary

Artificial Intelligence student passionate about building intelligent software systems and solving real-world problems through machine learning and scalable engineering solutions. Experienced in developing AI-powered applications, intelligent automation systems, and data-driven platforms across industrial, environmental, financial, and consumer domains. Strong interest in artificial intelligence, distributed systems, backend engineering, and building products that operate at scale.

Skills

Programming Languages: Python, SQL, JavaScript, C#

Areas of Interest: Artificial Intelligence, Machine Learning, Full Stack Development, Agile framework/SDLC, Object Oriented Programming, LLMops

Technical Skills: Predictive Modelling, LLM Integration, Prompt Engineering, Anomaly Detection

Languages and Frameworks: PostgreSQL, MySQL, FastAPI, SQLAlchemy, React JS/Next.js, Pydantic, Stable Baselines3

Tools and Technologies: AWS S3, Firebase, Supabase, Git, Docker, Redis, Groq API

Experience

Tube Products of India - Murugappa Groups

AI Engineer · Internship

- Developed an AI-driven monitoring system that combined real-time sensor data with historical manufacturing data to identify process anomalies, improve operational visibility, and support early issue detection.
- Collaborated with engineers and plant teams to understand operational challenges and built dashboards and tracking solutions that reduced manual monitoring efforts and improved decision-making efficiency across production workflows.

Brainwaves NeuroRehab

VR game developer · Internship

- Built a rehabilitation-focused VR application for stroke patients, enabling structured therapy exercises and real-time performance tracking.
- Collected and analyzed patient activity data to generate actionable insights for therapists, supporting treatment evaluation and patient progress monitoring. Tested with real patients at St. John's Hospital, Bangalore.

Marlion Games

Game Development and designing · Internship

- Built and delivered multiple digital products for educational and enterprise use cases, translating business requirements into user-focused software solutions.
- Took ownership of end-to-end development, contributing to product design, implementation, testing, and continuous enhancement to improve user engagement and overall product quality.

Projects

Whisperflow CRM | [Whisperflow](#)

- Developed **Xeno CRM**, an AI-native shopper marketing platform that converts natural language prompts into customer segments, automated campaigns, and personalized SMS workflows using **LLaMA 3, FastAPI, Next.js, and PostgreSQL**.
- Built a **microservices-based architecture** with asynchronous webhooks, real-time campaign analytics, automation workflows, and containerized deployment using **Docker, Render, and Vercel**.

Carbon AQI Monitoring and Prediction with Adaptive RL

- Developed an AI-powered environmental intelligence platform that monitored air quality, analyzed pollution patterns, and generated predictive insights to support proactive environmental decision-making.
- Applied machine learning and adaptive optimization techniques to forecast air quality trends and recommend mitigation strategies, combining real-time monitoring with intelligent decision support for sustainable environmental management.

CareerPro – Smart India Hackathon (Top 50 Teams) | [Career Pro](#)

- Developed a career guidance platform that provided personalized education and career recommendations through aptitude analysis, intelligent guidance workflows, and multilingual user support.
- Designed scalable backend services and user-centric features to improve accessibility for students in underserved communities, enabling informed decision-making through personalized insights, educational resources, and career planning tools.

AI Assisted Portfolio Risk Analyzer

- Developed an AI-assisted financial analytics platform that evaluated portfolio performance, quantified investment risk, and generated actionable insights to support data-driven decision making.
- Implemented risk assessment models and automated reporting workflows, integrating AI-generated explanations to provide clear portfolio summaries, risk alerts, and investment recommendations.

US - AI-Powered Couple Companion App | [US](#)

- Developed an AI-powered cross-platform application that delivered personalized recommendations, contextual insights, and intelligent user experiences through data-driven decision support and adaptive AI workflows.
- Designed a scalable real-time platform with secure authentication, user activity tracking, AI-assisted content generation, image analysis, and personalized recommendation systems while ensuring data security and seamless user experience.

Certifications

Agentforce Specialist proof Salesforce · 7246917	Dec 2025
AI Fluency: Framework & Foundations proof Anthropic	Jun 2026

Competitions

SMART INDIA HACKATHON proof TOP 50 OVERALL · CODE BUSTERS	Sep 2025
